

Welcome to **NEURA Robotics**, the innovator of the robotics world. Our goal is to equip collaborative robots with groundbreaking cognitive capabilities to enable safe and intuitive collaboration with humans. Under the leadership of founder David Reger, we have spent the first years of **NEURA Robotics** laying the foundations for humans and robots to work hand in hand.

"**We serve humanity**" is not just a motto, but our mission. Become part of our ambitious, international company and shape the future of robotics with us.

Welcome to **NEURA Robotics** - where innovation meets team spirit.

Your mission & challenges

As a Production Engineer, you will take technical responsibility for an entire robot family – from achieving series readiness to ensuring stable series production.

You will be the technical authority on the shop floor, ensuring that product, process, testing concepts, and production equipment work seamlessly together so that the manufacturing of our robotic systems functions reliably.

Your goal:

To establish and continuously improve robust, efficient, and quality-stable manufacturing processes so that our cognitive and humanoid robots can be produced reproducibly, error-free, and cost-efficiently.

Your main tasks include:

- You work closely with product management, mechanical and electronics development, purchasing, and quality to ensure that technical changes and product improvements are secured from a production perspective.
- You develop and optimize manufacturing processes to ensure efficiency, quality, and process stability.
- You support your robot family during series production, analyze error patterns, and implement sustainable corrective actions.
- You drive the automation of assembly together with internal partners from plant engineering.
- You implement and validate measurement, testing, and diagnostic technologies to ensure functional and quality requirements are met.
- You design material and information flows, derive layout and process improvements based on Lean principles, and implement them.

What we can look forward to

You are a technically skilled, hands-on engineer who enjoys supporting modern robotic systems in production, solving technical problems, and sustainably improving manufacturing processes.

You work in a structured and analytical way and have a deep understanding of the requirements of serial production of software-based mechatronic systems.

Your Qualifications:

- A completed Master's degree in mechatronics, production engineering, electrical engineering, measurement and testing technology, or a comparable technical qualification.
- Professional experience in production-related development, testing technology, or manufacturing automation.
- Solid knowledge of automation technology and sensor systems.
- Experience with Lean methods and value stream analysis; REFA or MTM are an advantage.
- An analytical and methodical way of working and strong technical understanding.
- Ability to collaborate across disciplines between development, production, quality, and plant engineering.
- Strong communication skills, assertiveness, and team orientation.
- Very good German and English skills, both written and spoken.

What you can look forward to

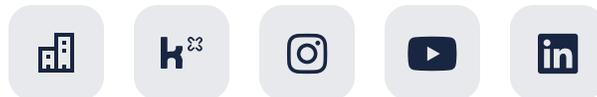

- Become part of an agile company, actively shape topics and benefit from flat hierarchies in a highly motivated team
- Enjoy an attractive salary, flexible working hours and 30 days of vacation
- The freedom to contribute your own ideas and drive them forward
- Celebrate successes together with company events
- Take advantage of our corporate benefits program
- And even more fun with great colleagues

[Apply](#)

We are looking forward to meeting you and shaping the future of robotics together. Are you in?

Couldn't find a suitable position? Please send us an unsolicited application.

We are always looking for passionate tech enthusiasts to help us revolutionize the world of robotics!
