

Welcome to **NEURA Robotics**, the innovator of the robotics world. Our goal is to equip collaborative robots with groundbreaking cognitive capabilities to enable safe and intuitive collaboration with humans. Under the leadership of founder David Reger, we have spent the first years of **NEURA Robotics** laying the foundations for humans and robots to work hand in hand.

**"We serve humanity"** is not just a motto, but our mission. Become part of our ambitious, international company and shape the future of robotics with us.

Welcome to **NEURA Robotics** - where innovation meets team spirit.

## Your mission & challenges

At NEURA Robotics, we are shaping the industry of tomorrow. As part of our journey from a start-up to a global scale-up, not only are our robotic solutions growing, but so are the demands for efficient, scalable, and modern logistics.

In your master's thesis, you will develop a strategic warehouse concept for our current and future locations in the Reutlingen area as well as across Germany. Your work will directly contribute to preparing our supply chain for the company's growth.

Your main tasks include:

- **Analysis of existing warehouse locations**  
Examine current warehouse spaces, processes, material flows, inventory levels, and roles at each site.
- **Assessment of logistical requirements**  
Evaluate the needs of our product areas – from raw materials and semi-finished goods to

finished products.

- **Development of an integrated warehouse concept**

Design a location strategy: What will be stored where in the future? Which inventories belong in external warehouses, and which should remain close to production?

- **Derivation of a warehouse and supply strategy for growth**

Define an efficient and flexible warehousing strategy that supports both series production and rapid growth.

## What we can look forward to

- Studies in logistics, industrial engineering, supply chain management, or a comparable field
- Practical experience in warehouse logistics; with relevant experience, a bachelor's thesis is also possible
- Enthusiasm for warehouse logistics and logistics concepts
- Analytical thinking, a structured way of working, and the ability to present complex relationships clearly
- Motivation to work on a real business case in a dynamic high-tech environment
- Independence, initiative, and a willingness to take responsibility for a strategically important topic

## What you can look forward to

- Become part of an agile company, actively shape topics and benefit from flat hierarchies in a highly motivated team
- Enjoy an attractive salary, flexible working hours and 30 days of vacation
- The freedom to contribute your own ideas and drive them forward
- Celebrate successes together with company events
- Take advantage of our corporate benefits program
- And even more fun with great colleagues
