

Welcome to **NEURA Robotics**, the innovator of the robotics world. Our goal is to equip collaborative robots with groundbreaking cognitive capabilities to enable safe and intuitive collaboration with humans. Under the leadership of founder David Reger, we have spent the first years of **NEURA Robotics** laying the foundations for humans and robots to work hand in hand.

"We serve humanity" is not just a motto, but our mission. Become part of our ambitious, international company and shape the future of robotics with us.

Welcome to **NEURA Robotics** - where innovation meets team spirit.

Your mission & challenges

- You are responsible for NEURA's AWS account management, Control Tower setup, and landing zone architecture.
- You work closely with engineering teams, security, and leadership to ensure that the cloud foundation scales with the business - without becoming a bottleneck.
- You design the guardrails, but you design them to enable, not to restrict.
- Designing, implementing, and evolving NEURA's AWS landing zone - including Control Tower, Account Factory, organizational units, and account vending pipelines.
- Owning the IAM and SSO architecture: permission sets, role hierarchies, and a structured, self-service-oriented access request workflow that keeps teams unblocked.

- Partnering with fast-growing engineering teams to onboard new accounts, new environments, and new use cases quickly - your default answer is "here's how we do it", not "that's not possible yet."
- Establishing and enforcing tagging policies, budget alerts, and cost visibility across all accounts, giving teams clear ownership of their cloud spend.
- Implementing cloud security controls that protect without paralyzing: SCPs, AWS Config Rules, GuardDuty, Security Hub, etc. - designed with the principle that security enables velocity, not the other way around.
- Acting as interface between Cloud Platform and the Security team, translating policy requirements into concrete, automated cloud controls.
- Everything as Infrastructure as Code. No manual changes in production ever.

What we can look forward to

- 5+ years of experience in cloud infrastructure or platform engineering, with significant hands-on AWS experience in a fast-growing company environment.
- Deep practical experience with AWS Control Tower, Organizations, Account Factory, and multi-account landing zone design - you have built this before, not just read about it.
- Strong Infrastructure as Code skills, IaC is your default tool, not an afterthought.
- Solid understanding of AWS IAM, SSO/Identity Center, and permission boundary design at organizational scale.
- Experience designing and implementing cloud security controls (SCPs, Config Rules, GuardDuty, Security Hub, VPC security) with a clear philosophy: security that enables teams, not security that blocks them.
- A proven solution-oriented mindset: you find creative, pragmatic paths forward.
- Comfort working at pace in a scaling organization - you can handle ambiguity, incomplete requirements, and shifting priorities without losing quality.
- Strong English communication skills; ability to explain complex access and governance topics clearly to non-specialists. German is a plus.

What you can look forward to

- Become part of an agile company, actively shape topics and benefit from flat hierarchies in a highly motivated team
- Enjoy an attractive salary, flexible working hours and 30 days of vacation
- The freedom to contribute your own ideas and drive them forward

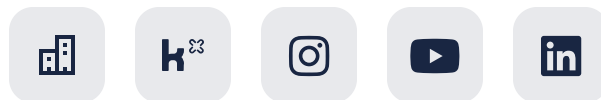

- Celebrate successes together with company events
- Take advantage of our corporate benefits program
- And even more fun with great colleagues

[Apply](#)

We are looking forward to meeting you and shaping the future of robotics together. Are you in?

Couldn't find a suitable position? Please send us an unsolicited application.

We are always looking for passionate tech enthusiasts to help us revolutionize the world of robotics!
