

Welcome to **NEURA Robotics**, the innovator of the robotics world. Our goal is to equip collaborative robots with groundbreaking cognitive capabilities to enable safe and intuitive collaboration with humans. Under the leadership of founder David Reger, we have spent the first years of **NEURA Robotics** laying the foundations for humans and robots to work hand in hand.

"We serve humanity" is not just a motto, but our mission. Become part of our ambitious, international company and shape the future of robotics with us.

Welcome to **NEURA Robotics** - where innovation meets team spirit.

Your mission & challenges

In our logistics department, it's not just about moving materials from A to B. We are building a smart factory in a fast-growing robotics environment – transitioning from a start-up to a scale-up.

To make this work, we need you as a Logistics Planner (Human) who has full control over material flows while also structuring, questioning, and continuously improving our processes.

You are the central interface between:

- Sales
- Production Planning / Manufacturing
- Procurement & Suppliers
- Warehouse / Raw Material Logistics

Your Main Responsibilities:

- You take responsibility for material and raw material planning for defined product areas and ensure timely supply to production.
- You plan and manage inventory levels and material requirements based on forecasts, customer orders, and production plans.
- You work closely with production planning to align material availability with production capacity.
- You act as the main point of contact for Sales regarding delivery dates, availability, and feasibility.
- In coordination with Procurement, you define order quantities, call-offs, and priorities – especially for critical materials.
- You identify bottlenecks and material shortages early, initiate countermeasures, and coordinate rescheduling, prioritization, and special actions.
- You maintain and optimize planning and scheduling parameters (e.g., lot sizes, minimum stock levels, safety stock) in the ERP/planning system.
- Together with the team, you establish clear processes, interfaces, and responsibilities in logistics and material planning – and document them in a practical way.
- You actively contribute to building our smart factory: digitalization, transparency in material flows, standards, and KPIs.
- You support operational execution, e.g., creating/updating planned orders, purchase requisitions, and clarifying deviations with warehouse, procurement, and production.

What we can look forward to

- A degree in logistics, business administration, industrial engineering, or a comparable field
- Professional experience in material planning, scheduling, or production logistics – ideally in an industrial environment
- Familiarity with working alongside Sales, Production, Procurement, and Warehouse teams, and understanding their needs and language
- Confident use of an ERP system (e.g., for scheduling, material master data, inventory) and an affinity for numbers and data
- A highly structured and independent way of working – you value order in processes, lists, parameters, and workflows
- A strong interest in analyzing, standardizing, and improving processes rather than just “firefighting”
- A hands-on mentality: you can think conceptually but are also willing to get involved operationally when needed

- Strong communication skills and assertiveness when working across interfaces – you are not afraid to address issues proactively
- Good German and English language skills, both written and spoken

What you can look forward to

- Become part of an agile company, actively shape topics and benefit from flat hierarchies in a highly motivated team
- Enjoy an attractive salary, flexible working hours and 30 days of vacation
- The freedom to contribute your own ideas and drive them forward
- Celebrate successes together with company events
- Take advantage of our corporate benefits program
- And even more fun with great colleagues

[Apply](#)

We are looking forward to meeting you and shaping the future of robotics together. Are you in?

Couldn't find a suitable position? Please send us an unsolicited application.

We are always looking for passionate tech enthusiasts to help us revolutionize the world of robotics!
